Company History

ConNet was founded in 2015 by a well-known professional with many years of experience in the management of freight forwarding companies.

The company's main objective is to offer maximum quality, integrated services in the fields of AIR FREIGHT, OCEAN FREIGHT and ROAD TRANSPORT, as well as CUSTOMS CLEARANCE, LOGISTICS and DISTRIBUTION SERVICES.

Today **ConNet** occupies a prominent place in the ranking of companies in its field, being in a prominent position with various airline companies. Furthermore, the company enjoys an excellent financial situation and counts on a team of highly qualified professionals eager to face the challenges of the future. This formula has given the company high growth rates in its business volumes in recent years.

ConNet has based its good market position on a direct and personalised treatment for each customer, a rapid and efficient service, competitive prices for all its services and monitoring and precise information regarding the goods, counting on its global network of agents throughout the world.

GPS localization container and temperature monitoring

ConNet introduces a new level of performance for tracking and monitoring of goods transported in containers. **ConNet** means ensuring total control over the movement of their goods to order to better manage the timing and terms of delivery.

The system tracks the location and other critical data by incorporating a small microprocessor, an electronic control unit, a GPS receiver and a GSM modem. Sophisticated sensors constantly monitor and accurately the conditions transport in containers: changes in temperature, door of the container or any tampering is immediately detected and reported to the central station.

FEATURES

Ease of installation and commissioning. without cables, external power supply or antennas, installation and uninstallation of this little device are really simple and do not require specialized personnel.

- Programming the position monitoring
- Sending alert messages in the event of anomalies
- Scheduled monitoring

The device is configured to communicate their position and other information at predefined intervals (synchronized with a GPS clock) according to the needs of the customer.

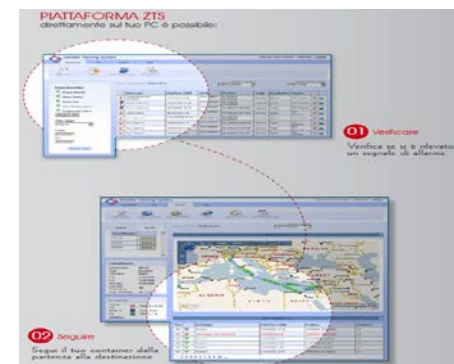

Temperature and location GPS DEVICE for reefer ocean box

Tracking device is based on technologies proprietary and subject guaranteed to extensive testing from the experience of Magneti Marelli, one of the most important industries of industrial innovation that have made their key value.

The CTD (Container Tracking Device) is absolutely compact and designed to operate in harsh environments, according to the standard IP 65.

Using GPS, the unit determines the precise position of the asset by combining this information with the data acquired through sophisticated sensors, data which are then stored and transmitted to a central server.

The CTD is a unit "disposable" and involves no cost or return shipping.

Perishable goods - Refrigerated transport

since years **ConNet** has increased its specialization in perishable transport goods, for this our company is organized with this own refrigerated trucks.

Always to ensure the control of “cold chain”.

Beyonde our special equipment we have built in our warehouse a cool room with a capacity of about three hundred pallets, that we use for goods in transit.

Also we are know from the airlines for the transport of perishable goods to all over the world with its rental of Envirotainers RAP / RKN etc
